

A calmer way to choose and configure a Volvo

AI-guided discovery and configuration inside Volvo Cars UK

Prototype pitch deck

One product. One P0 problem. One AI enhancement.

**VOLVO
GUIDED
ASSISTANT**

The P0 problem

Customers face a high-stakes choice before they know which Volvo fits their life.

The current configurator starts with fields. Customers start with needs.

A customer must make model, powertrain, trim, colour, wheel, package and finance decisions before they can assess whether the car suits them personally or financially.

01

Model

02

Powertrain

03

Design choices

04

Finance

Result: decision overload, repeated back-and-forth, and abandonment before retailer handoff.

Who the assistant serves

Premium Volvo customers want confident guidance without a sales-heavy experience.

01

Premium buyers
Expect transparent guidance before a high-value purchase.

02

Existing Volvo customers
Want to move into electric driving while retaining familiar safety and comfort.

03

Families
Need space and confidence without a feature-heavy decision process.

04

Sustainability-minded customers
Assess electrification, charging practicality and energy use.

05

Finance explorers
Need help comparing purchase, finance and lease routes.

Design principle: guidance should feel calm, personal and clear, reflecting Volvo’s Scandinavian design values.

AI-guided configuration

A conversational layer turns natural-language needs into verified Volvo decisions.

1

Understand

Captures family size, driving needs, budget, design taste and electrification preferences.

2

Recommend

Matches stated needs to catalogue data, explains trade-offs and asks only useful follow-up questions.

3

Configure

Applies trim, colour, wheel and package choices while preserving customer context.

4

Continue

Moves the customer to finance, delivery and retailer handoff when they are ready.

The assistant uses verified catalogue data and says when information is unavailable. It never invents price, specifications, finance eligibility or delivery details.

Prototype flow

A customer moves from a vague need to a configured Volvo in one guided conversation.

01

Customer need

“Family of five, city driving, cost-conscious.”

02

Focused question

Ask only for a missing detail that changes the shortlist.

03

Shortlist

Compare suitable models with price, seats, range and charging.

04

Configuration

Choose model, then update colour, wheels or packages in chat.

05

Next step

Move to finance, delivery and retailer handoff.

Demo moment: “Take me to the next step” hides the full discovery chat and opens finance, delivery and retailer handoff. A compact order assistant remains available for contextual help.

Expected impact and MVP success

The MVP aims to reduce decision effort while keeping every recommendation transparent.

Customer impact

- A faster route from lifestyle need to a confident shortlist
- Clearer trade-offs across price, seats, range and configuration
- A calmer premium journey aligned with Scandinavian simplicity

Volvo Cars impact

- More completed configurator journeys and retailer enquiries
- Higher-quality retailer leads with needs and choices already captured
- More relevant discovery of electrified models and Volvo services

MVP success signals

Shortlist reached • model selected • configuration changed • next-step progression • retailer enquiry prepared
